IDEAL NURSERY & ORCHARD CO.

Smithville, Tennessee

OUR MOTTO: "To Help Make America More
Fruitful and More Beautiful."

American Association of Nurserymen

BUILDERS of BEAUTY

FOREWORD

To our many customers who have so loyally supported us with their orders in the past: We extend to you our thanks, with the full assurance that we shall strive to serve you as well, or better if possible, in the future than we have in the past.

To those with whom we have had no dealings: We solicit your orders, and ask that you give us a trial. We have been very successful in holding our customers. Our records show "that once you are a customer of ours you continue to be" so long as you need Nursery Stock.

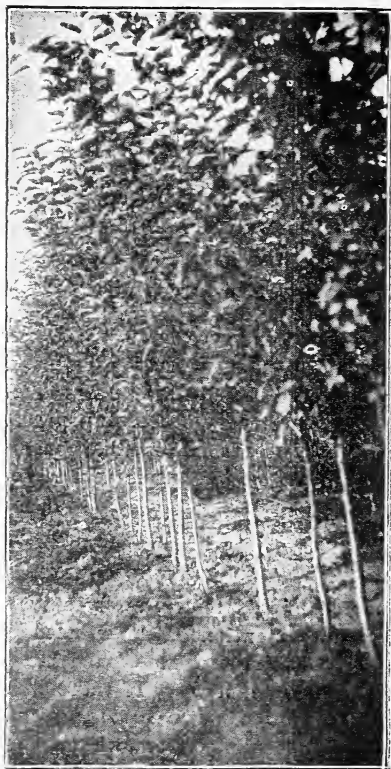

TERMS AND CONDITIONS

Prices named in this folder, apply only to quantities and grades mentioned. If in need of larger quantities, or anything not mentioned herein, write us and we will quote prices. If there is anything we cannot furnish, we will be glad to point you to some reliable nurseryman, from whom you may be safe in buying.

PACKING—We pack all orders as carefully as possible, either in bales or boxes, so they are sure to reach the customer in perfect condition.

CLAIMS (if any) must be made immediately upon receipt of order, then they will have our prompt attention and made satisfactory.

TERMS—We offer the usual (30 day) terms to those of known responsibility, but must have satisfactory business references from others. One-fourth cash must accompany orders where you wish the stock shipped C.O.D. On all Mail Orders, we pay the postage, but on express or freight shipment they will be shipped with transportation charges collect, unless otherwise arranged by some of our representatives.

TWO-YEAR OLD APPLE TREES

One Month Before Frost

Our 2-year Trees show wonderful growth. Being situated on the famous HIGHLAND RIM of Tennessee where the land is especially adapted to the development of both roots and branches of fruit trees and our seasons are usually favorable to growing conditions. Our 2 year Trees will measure with the 3 and 4 year trees of the northern states.

Our scions and buds are taken from the very best bearing specimen trees which, we feel positive, insures the planter better and earlier, yields of fruit.

CRAB APPLES

Within the past few years a great many people have paid much attention to improving this useful fruit. Their efforts have been attended with marked success. The Crab Apple succeeds equally well in all sections, and is valuable for cider, preserving, jellies, and some of the improved sorts are excellent for eating. Every orchard should contain an assortment of Crab Apples, as the trees are very handsome, annual bearers, and usually bear at a very early age, yielding enormous crops.

PEACHES

Few fruits enjoy a greater popularity than Peaches. With delicious flavor, they combine attractive appearance, and the uses to which this fruit may be put are so many that there is never enough for all. This applies especially to communities in which farmers and fruit growers can establish a thriving business without serious effort or large expenditures of money. Peaches do well in most soils of our country, and by following carefully the suggestions offered by most reliable nurserymen trees may be easily established and bring splendid returns in a few years. By selecting varieties that ripen early, mid-season and late, the peach season may be extended over a considerable period of time. Our trees are started RIGHT and they continue right, if cared for.

APRICOTS

A beautiful and delicious fruit, a close relative of the Plum and Peach, combining the qualities of both. The fruit ripens after the early cherries, and just before the plums and peaches. Tree is as hardy as the Peach, and requires about the same cultivation. It ships well and always commands a good price in the market.

 TRUE TO NAME IS OUR AIM

DWARF PEARS

The Pear is one fruit that can be grown profitably as a dwarf tree. It differs from a standard tree inasmuch as it is grafted on quince root. This retards the growth and makes a dwarf tree. This slow growth makes it more resistant to blight and other pear tree diseases than the standard trees, which grow more rapidly. It also causes the tree to bear fruit earlier—often heavy crops the third and fourth year from planting. They also may be planted much closer (10 to 12 feet) than the standard trees which makes them very desirable for city planting and limited space even on farm home grounds. The Duchess, Anjou, Bartlett, and Seckel are the best suited varieties for dwarfing. A few Dwarf Pear Trees should be planted in every orchard. Also our Standard Trees, are very desirable, and will give good results, if cared for properly.

THE PEAR IN GENERAL

The Pear very justly ranks as one of the most delicious of fruits, by reason of its fine juicy texture, exquisite flavor and aroma. Of late years much attention has been given to the culture of pears, and those who have intelligently cultivated

TRUE TO NAME IS OUR AIM

it for market, have found it to be a profitable occupation.

Kieffer	Garber
Sheldon	Seckel
Pine Apple or	Vermont Beauty

PLUMS

The Plum, like the pear and other fine fruits, succeed best in heavy soil with some clay, and being almost free from Diseases they can be grown very profitably. In later years the demand for plums has increased very rapidly. The finer kinds are excellent desert fruits of rich and luscious flavor. For cooking and canning, they are unsurpassed. Every home orchard should abound with Plums, and commercial culture of this fruit will prove very profit-

TRUE TO NAME IS OUR AIM

able. People who grows pigs and poultry, especially, should plant their lots and grounds to Plums.

CHERRIES

There are but few fruits that are more desirable than Cherries. They are being planted more and more each year. The ever increasing demand for Cherry Trees keeps us guessing as to how many we should propagate each season. There is always a brisk demand in the market for the fruit, and there are but few things easier grown than Cherries. Cherries thrive in most any dry or well-drained soil. The fruit is delicious, whether eaten from the hand or preserved and no home orchard is complete

TRUE TO NAME IS OUR AIM

without a liberal planting of Cherry Trees. And cultivating this fruit for market purposes has proven very profitable in almost every instance.

QUINCE

The Quince is attracting a great deal of attention as a market fruit. The tree is hardy and compact in growth, and requires but little space, the quince is very productive, bears regular crops, and comes into bearing at early age.

The fruit is much sought for canning and preserving. It will grow in most any soil, but heavy, strong soil is best adapted to their development.

PRICES

	Each	10	100
4 to 5 ft.	\$1.50	\$12.50	\$100.00
3 to 4 ft.	1.25	10.00	90.00

VARIETIES

Champion, Orange, Meache's Prolific, Rhea's Mammoth.

GRAPES

Everyone should at least have a small vineyard to complete the home garden, matters not what else you may have planted. They require very little cultivation, and the returns are so abundant.

If proper selection of varieties is made, one may have fresh grapes for many weeks. They can be trained over fences, trellises, or doorways, and thus be ornamental as well as useful to grow for market. They can be planted on hillsides and rough places that are unsuitable for other crops. They should in all cases have good exposure to the sun and air.

CURRENTS

The Currant is one of the most valuable of small fruits. They mature just before Raspberries and can be used either raw or cooked. They are excellent for jellies and preserves. Being very hardy, they do not winter kill and are easy of cultivation, requiring little care. They can be grown in any good Garden Soil, and should be planted 3 to 4 ft. apart.

GOOSEBERRIES

The Gooseberry is a highly prized fruit, owing to the peculiar tart flavor it contains. It is easily cultivated, does best on a deep soil, well manured and, if inclined to be dry, mulch to retain the moisture. The bushes should be regularly thinned or pruned to obtain large fine fruit.

THE BUCKEYE THE APPLE OF C

With the limited space below we can only slightly mention the many remarkable traits of this wonderful New Apple. It would take pages to do it justice. This Apple came to notice only a few years ago by chance finding. The Tree alone in the forest; the small home orchard grafted from the Original Tree, and the Parent Tree still in the woods, are on the Farm of C. C. Wilcox, Vinton, O. This Tree, since finding in 1913, and the orchard mentioned, since 1916, has never had an off year from fruiting—Fourteen Years without a failure, amid all the changing seasons. Even the 1927 crop was there, with all other apples almost a complete failure in that section. It blooms 2 to 3 weeks later than most any other variety. Later yet than Rome Beauty (by 10 days) in the same section.

The Fruit ranges from medium to large, almost round, yellow in color, slightly flushed where ex-

TRUE TO NAME IS OUR AIM

BEAUTY

LATEST MERIT

posed to the sun, dotted with little pink dots. The flesh of the Apple is unusually Firm at all times, but never tough. It is brittle, juicy, and of the highest flavor imaginable. Its liciousness cannot be expressed in words. Mr. Richard Faxon, who was Chief of the Board of Plant Industry of Columbus, Ohio, says it is very much like the Golden Delicious. It has been readily admitted by numbers of fruit experts that it is richer flavored than this desirable variety. Its keeping qualities are unsurpassed by any. It has been kept through the entire winter and up to 15th of May in home storage. This Apple is not one that must be put into cold storage to keep. This feature, combined with its superior bearing habits and high quality of the fruit, is destined to make it a wonderful Apple, and a very desirable variety to plant in both home and commercial orchards. In 1923 we purchased from

TRUE TO NAME IS OUR AIM

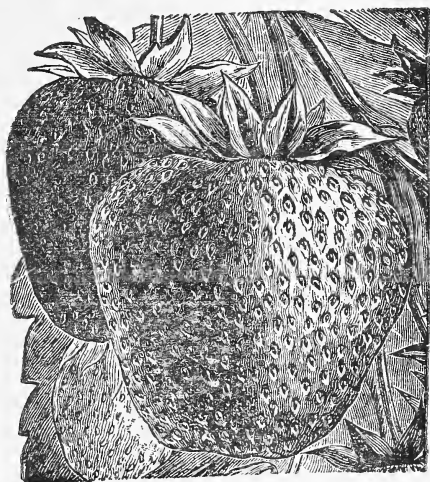

Mr. Wilcox, the exclusive right to commercialize this variety. Since that time we have been growing the trees under the strictest care and supervision of the best growing experts that our country affords. It is a splendid grower in both nursery and orchard and bids fair up to this date to be one of the freest from all apple diseases that we have ever grown. Our supply of this variety has never yet been large, for we have cut scions only from the 26 bearing trees on the Wilcox farm. We now hope to grow heavily in this wonderful variety as we have planted on our own ground an orchard for both fruit and scions and have planted another 100 trees on the Wilcox farm in Ohio. All of these trees are due to bear in 1928 and 1929. We hope then to supply the everincreasing demand for this variety. We are soliciting demonstration orchards of not less than 50 or over 100 trees to be planted in favorable locations, and by parties who will give proper care and attention to the orchard at one-half the regular selling price, paid when trees are delivered and the remaining payment to be made when trees have borne fruit in satisfactory quantity.

PRICES

	Each	10	100
2 yr. No. 1 Trees	\$1.25	\$10.00	\$90.00
1 yr. No. 1 Trees	1.00	9.00	80.00

Nothing sold or delivered except the very best grade in both 1 and 2 year olds.

TRUE TO NAME IS OUR AIM

STRAWBERRIES

Few fruits offer greater returns for land labor and investment in plants, than the Strawberry. With little care and attention they thrive in most any soil, while extra efforts, and cultivation will be rewarded by especially fine crops. Whether you grow for market or home use plant only the best sorts by all means. Below are listed the cream of all, in our judgment.

PRICES, SPRING VARIETIES

TRUE TO NAME IS OUR AIM

GRADING AND PACKING

It is our Aim at all times to make our grades full and strong. When in Doubt always put it in the next lower grade. Our Trees even in the smaller grades, must show perfect root system. Otherwise they are thrown out. We exercise every possible effort to pack our trees and plants so that they reach the customer in perfect condition. We have had many unsolicited compliments on our methods of packing.
